

✓ PDS Practical 8

- Name- Mehek Sawant
- Roll No- 34
- Batch-02
- Date of assignment-23/09/2026
- Date of submission- 23/09/2026

Q1. Write a Python program using BeautifulSoup to extract and print all <h2> headings from a webpage.

```
import requests
from bs4 import BeautifulSoup

url = "https://www.google.com"

response = requests.get(url)
soup = BeautifulSoup(response.text, "html.parser")

# Get the page title
print(soup.title.text)

# Get all headings
for heading in soup.find_all("h2"):
    print(heading.text.strip())
```

Google

Q2. Write a Python program using BeautifulSoup to extract all <a> tags and print their link text and URLs.

```
import requests
from bs4 import BeautifulSoup

url = "https://www.google.com"

response = requests.get(url)
soup = BeautifulSoup(response.text, "html.parser")

# Get all links
for link in soup.find_all("a"):
    print(link.text.strip())
```

Q3. Create a Seaborn bar chart showing the sales of 5 different products.

```
import seaborn as sns
import matplotlib.pyplot as plt

products = ["A", "B", "C", "D", "E"]
sales = [120, 180, 150, 200, 100]

sns.barplot(x=products, y=sales)

plt.title("Sales of 5 Products")
plt.xlabel("Products")
plt.ylabel("Sales")
plt.show()
```

Q4. Create a Seaborn scatter plot showing the relationship between students' study hours and their marks.

```
import seaborn as sns
import matplotlib.pyplot as plt

study_hours = [1, 2, 3, 4, 5, 6, 7, 8]
marks = [35, 40, 50, 55, 65, 70, 80, 90]

sns.scatterplot(x=study_hours, y=marks)

plt.title("Study Hours vs Marks")
plt.xlabel("Study Hours")
plt.ylabel("Marks")
plt.show()
```

Q5. Create a Seaborn histogram to display the distribution of students' marks.

```
import seaborn as sns
import matplotlib.pyplot as plt

marks = [35, 40, 45, 50, 55, 60, 65, 70, 75, 80, 85, 90, 95]

sns.histplot(marks, bins=5)

plt.title("Distribution of Students' Marks")
plt.xlabel("Marks")
plt.ylabel("Number of Students")
plt.show()
```
